

*Kleen-Flo*

Water Treatment Control for  
Mineral Precipitants and Scale

**AG WATER CHEMICAL**  
Water Treatment Services

# Kleen-Flo

## Water Treatment Control for Mineral Precipitants and Scale

**Make every drop count!! Prevent contamination of your drip irrigation system to avoid plugging, maintain efficiencies and operate at a high uniformity.**

***Kleen-Flo** is a proprietary liquid blend of chemistries designed to control mineral precipitation and scale build-up in agricultural irrigation systems. **Kleen-Flo** is formulated to prevent plugging in irrigation systems caused by iron, manganese and calcium deposits. This unique blend of chelating agents, disperants and surfactants sequesters minerals to prevent precipitation, scale build-up and deposits in order to maintain free flowing irrigation systems.*

- **Proprietary blend utilizes four modes of action to prevent build-up: complexation, sequestration, chelation and dispersion**
- **Kleen-Flo is stable and effective over a wide range of water characteristics – not pH or temperature dependent**
- **Provides gradual removal of existing deposits in systems that have accumulated debris over a few years**
- **Highly effective blend allows for low injection rates saving money**
- **Safe. Zero hour re-entry interval**

## ***Kleen-Flo M***

- **Kleen-Flo M provides an effective solution for high Manganese concentrations**
